Valdes, Justine Jaye

Introduction

"Where do we eat?" is always what we hear when our family, friends, or even classmates are planning to go out for something to eat, whether it be a quick snack or a filling meal. However, choosing a place takes forever when there are so many options to choose from without having any idea what this long list of options have to offer. Recommendations from a friend, a review on google or a business post on social media, all feel helpful at first, but they can be vague, biased, or hard to verify especially when the information we need are not stated clearly and in one place. That is where **Bite Back** comes in, fulfilling a need for a more organized and community-driven platform where anyone can easily share detailed experiences, ask questions, and compare recommendations without having to drift off to multiple apps or or scroll endlessly through unrelated posts. Through a forum-style system with user accounts, profiles, posts, comments, voting, and search features, **Bite Back** makes it easier for users to discover restaurants that match their preferences while making faster, more informed dining decisions.

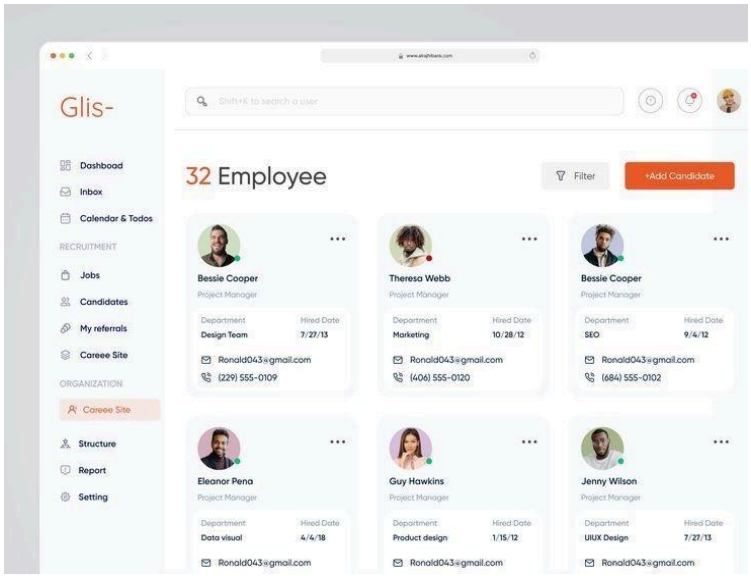
Description of the Web Application

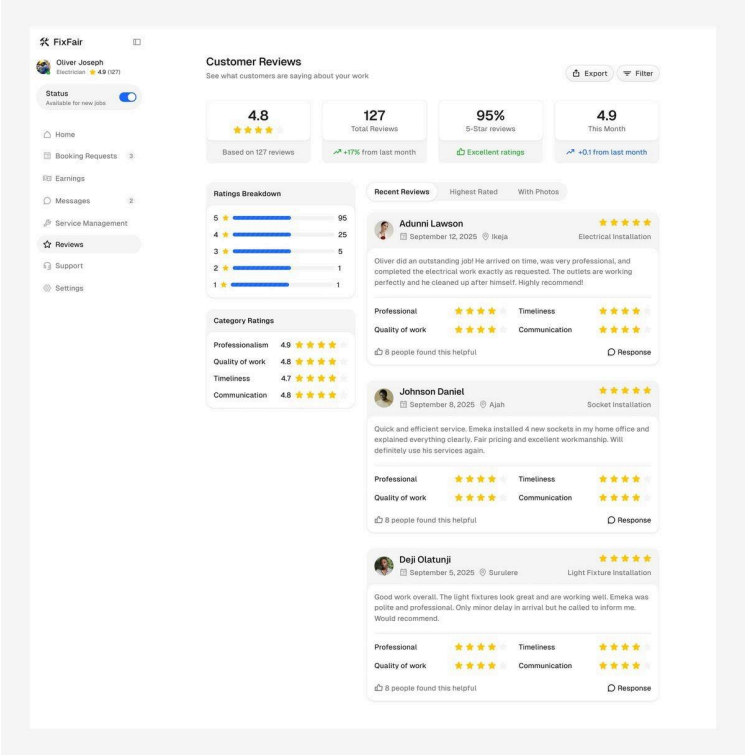
This application should be user-friendly and interactive to the users, with features that aids the user in navigating this page. The features are composed of the following:

- **User Account**
  - Register
    - This will allow new users to register which will ask for their information such as their name, username, email address, password, etc. This registration is important to monitor the users of the application.
  - Log-in
    - This will only work for users who have registered their email address and password which will be asked in order to login to the actual home page.

    - Log-out
        - This feature is for the users to log out of their account after they are done scrolling through the page
- **User Profile**
    - View a user profile
        - A user will automatically have a user profile page after they have registered an account. This page will contain the information of the user and their latest posts. Other users may see each other's profile and will only see the non-sensitive details of a user.
    - Edit profile
        - A user should be able to customize their own profile such as setting a profile picture, enter a short description, etc.
- **Posts Feed**
    - View all posts
        - This is the "home page" of the application which is automatically directed after a user has successfully logged in their details. This page will display the most recent posts first followed by much older posts.
    - View filtered posts
        - Similar to the home page, but allows the user to set filters on what appears on the home page based on their preference. (Ex: Cuisine - American)
- **Posting Management**
    - Post
        - Only available to registered users, they can post reviews and ratings for restaurants and it will be featured on the home (view all posts) page of other users.
    - Comment
        - Only available to registered users, other users may be able to comment on a post.
    - Edit/delete a post
        - A user should be able to edit/delete their post after posting if they wish to do so.
    - Edit/delete a comment
        - A user should be able to edit/delete their comment on a post if they wish to do so.
    - Upvote
        - Allows users to upvote an existing post from other users if they find it helpful, informative, or agree with it, allowing them to appear more to other users.
    - Downvote
        - Similar to upvote but vice-versa, allowing unhelpful, and uninformative posts to show up less frequently.

    - Tier/Badge (verified status)
        - To incentivise posting, Users can level up or get this if their posts reach a certain number of upvotes
- General Features
    - Search
        - This feature will allow users to search for posts using specific keywords, matching to restaurant names, locations, food types, cuisines, etc.
    - Navigation Bar
        - This feature will allow users to easily move between the four main pages, Feed, Notifications, Profile, Settings
    - Report
        - Allows users to report existing posts from other users to remove unwanted posts





Inspiration: Sample UI Design for viewing reviews at a glance
